

# OmniGlobe Solutions

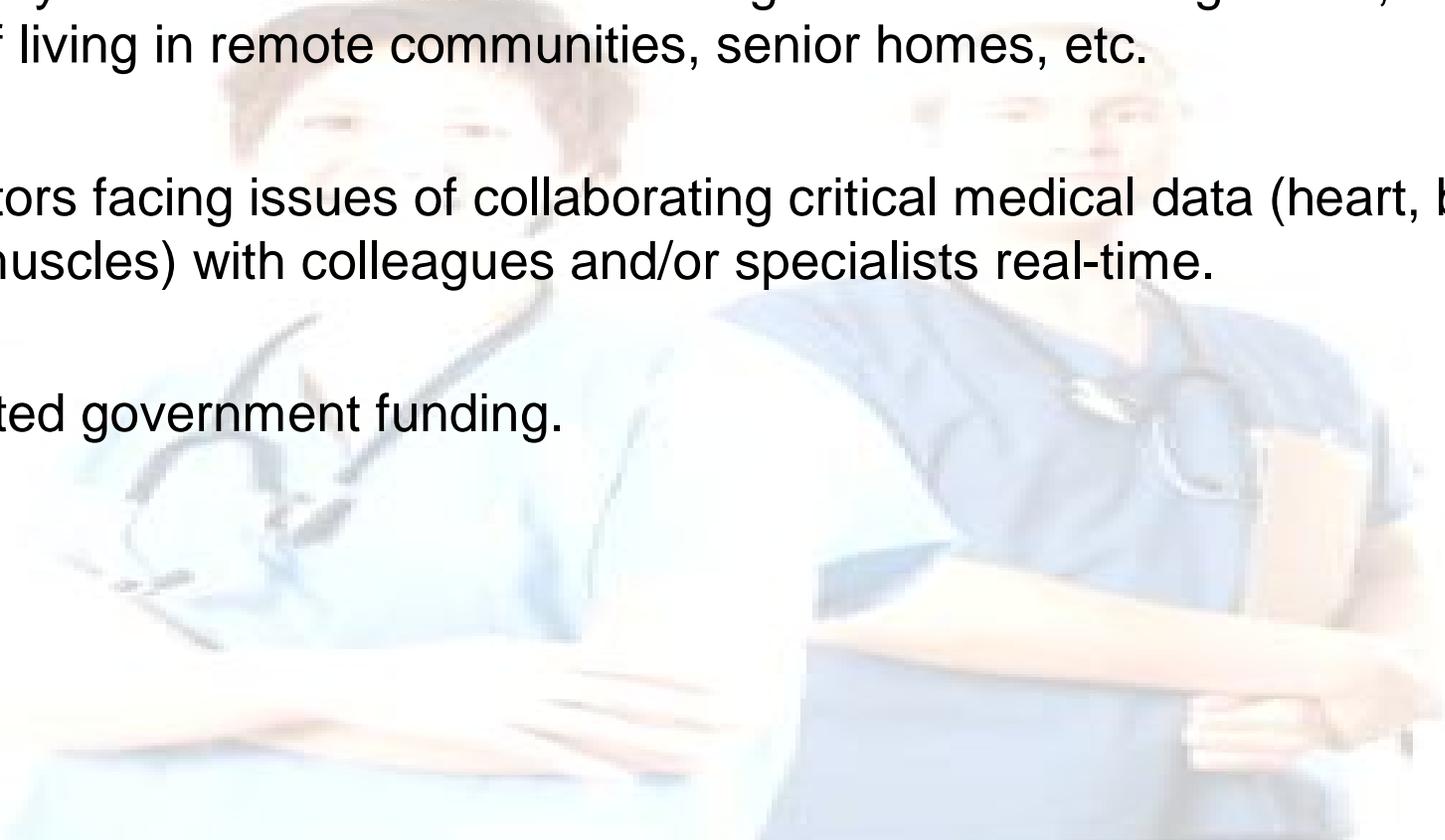

**Recent news : Omni Health system selected by Bill Gates & Melinda foundation**

## Current Challenges

---

- Quality of service issues such as long wait time in emergencies, travel time if living in remote communities, senior homes, etc.
- Doctors facing issues of collaborating critical medical data (heart, brain and muscles) with colleagues and/or specialists real-time.
- Limited government funding.

# Issues

---

## Primary issues

- Insufficient means to track and diagnose critical areas such as heart, brain and muscle before an individual visits emergency (e.g. from senior homes, nursing homes, remote communities, etc.)

The systems available now are stove-piped (three systems for heart, brain and muscles) and are high in cost and big in form factor resulting in being unaffordable

- Not enough collaboration between nurses in senior homes, nursing homes, remote communities with specialists

The current systems produce their individual reports and are not cohesive and in one format. They don't offer real time information sharing

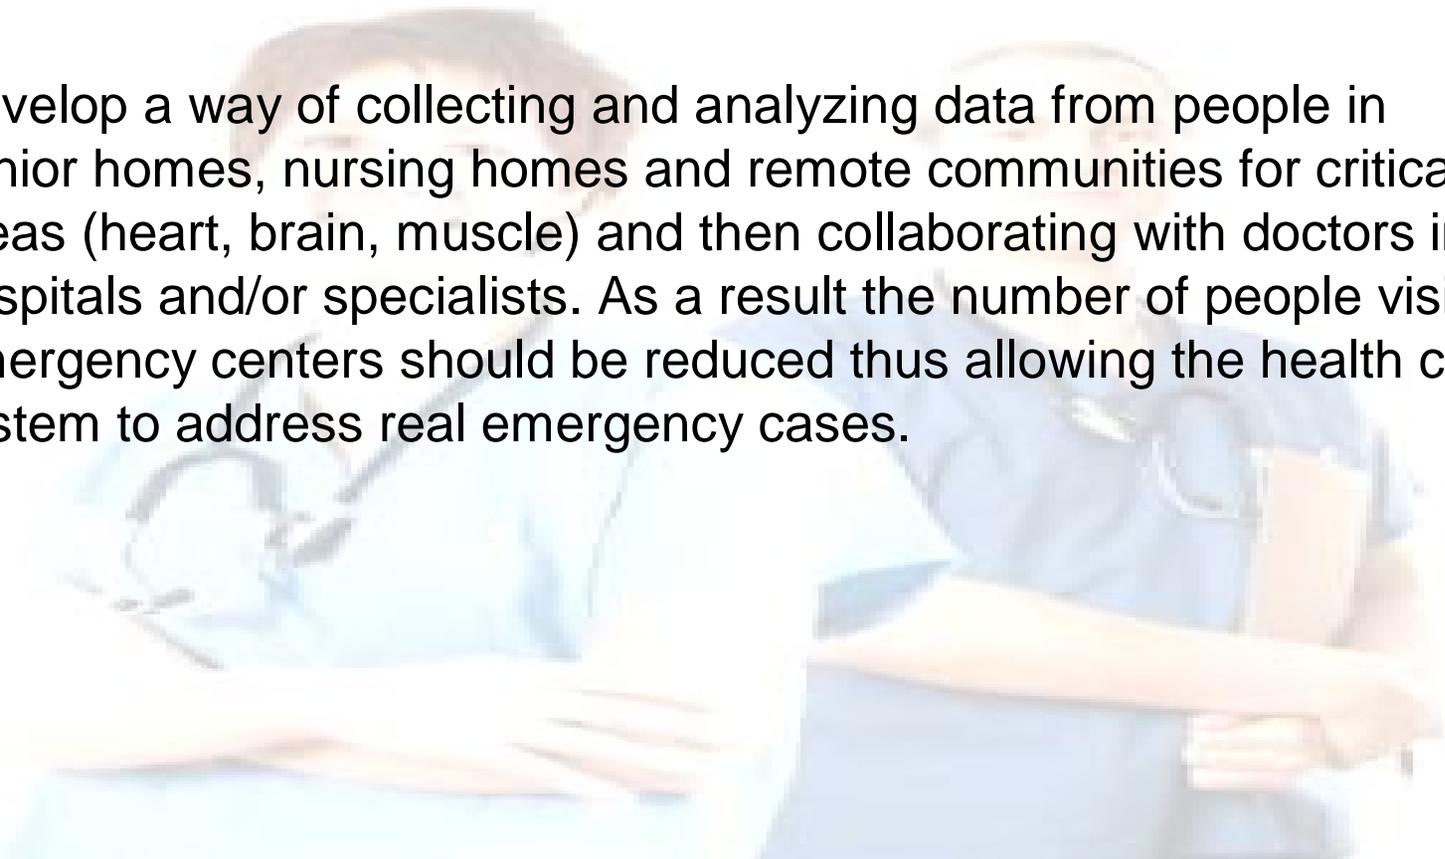

## RESULT

- People going to emergency when not needed (statistically more than 90% fall in this category)
- People who truly need service must wait in line
- Quality of service lower

## Solution

---

Develop a way of collecting and analyzing data from people in senior homes, nursing homes and remote communities for critical areas (heart, brain, muscle) and then collaborating with doctors in hospitals and/or specialists. As a result the number of people visiting emergency centers should be reduced thus allowing the health care system to address real emergency cases.

# Omni Health System

---

Omni Health brings next generation tool sets to enable

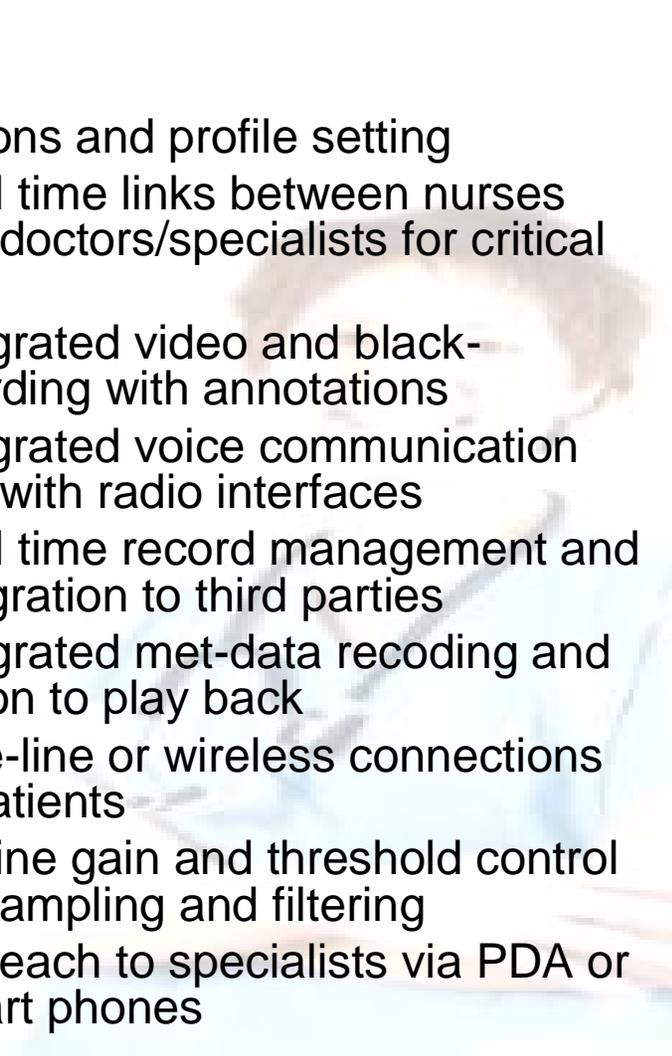

- collection and consolidation of critical data's from brain, heart and muscles.
- real time collaboration of information (data, voice and video)
- information sharing on a PDA and Smart phones
- integration of sensors for cholesterol, sugar and diabetics all in

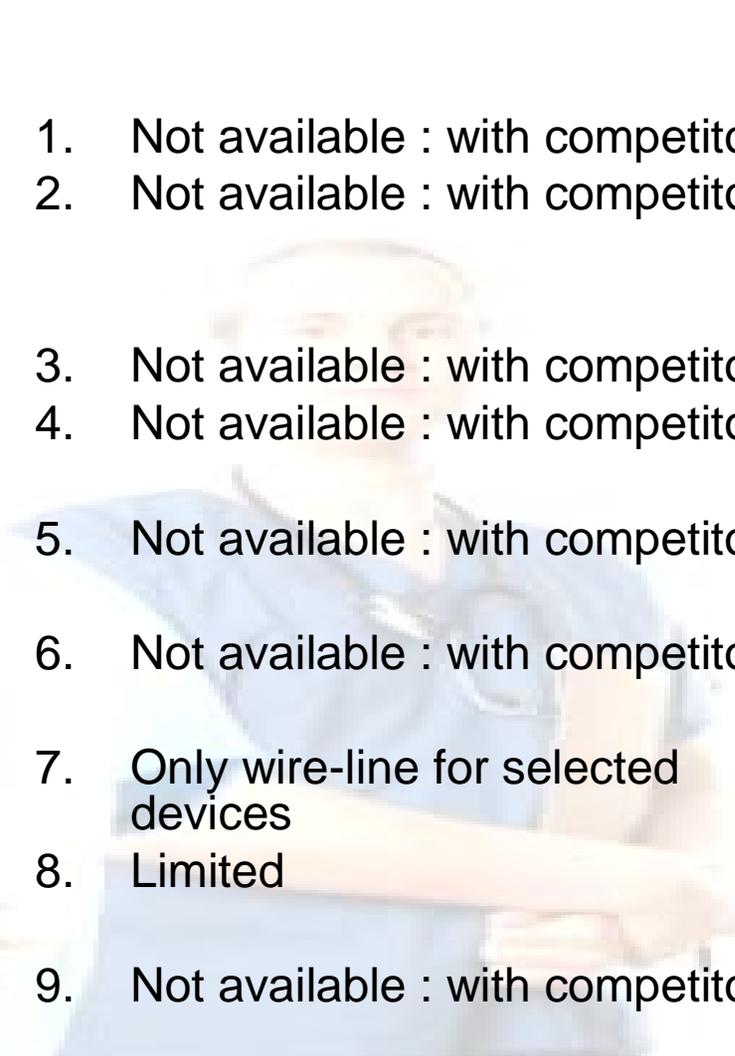

**ONE SINGLE PLATFORM & can be used in senior homes, nursing homes and remote communities**

---

# Omni Health capabilities

- 
1. Logons and profile setting
  2. Real time links between nurses and doctors/specialists for critical data
  3. Integrated video and blackboarding with annotations
  4. Integrated voice communication and with radio interfaces
  5. Real time record management and integration to third parties
  6. Integrated met-data recoding and option to play back
  7. Wire-line or wireless connections to patients
  8. On line gain and threshold control for sampling and filtering
  9. Outreach to specialists via PDA or Smart phones

# Omni Health User Screen

The screenshot displays the Omni Health System interface with several key components and annotations:

- Session control:** A menu is open in the top-left corner, showing options: Save Session, Load Session..., and Set Patient...
- Heart rate:** A digital display shows a heart rate of 60 bpm.
- ECG:** A grid displays four ECG leads: I, II, III, and aVR.
- Place holder for other biometrics Like EEG, etc:** A toolbar at the top contains icons for Notes, Snapshot, WebCam, ECG, and EMG.
- Blood pressure:** A digital display shows a blood pressure reading of 102 mmHg.
- EMG data:** A panel on the right shows four EMG lead waveforms: EMG Lead1 [Left Laternal Hamstrings], EMG Lead2 [Right Laternal Hamstrings], EMG Lead3 [Left Quadriceps], and EMG Lead4 [Right Quadriceps].
- Notes & IM:** A bottom-right window titled 'Notes' contains text: 'Welcome to Omniglobe Solutions. Omniglobe Solutions presents a unique software based medical collaboration solution for remote communities. The solution enhances information (data, video an biometrics sharing between remote site and local medical site. Please contact Dr Mike Mulhaupt for more information www.omniglobesolutions.ca Canada'.
- Multi video collaboration:** A video window at the bottom-left shows a live video feed of a man.

At the bottom of the window, the status bar indicates 'Server up' and 'User: op1'.

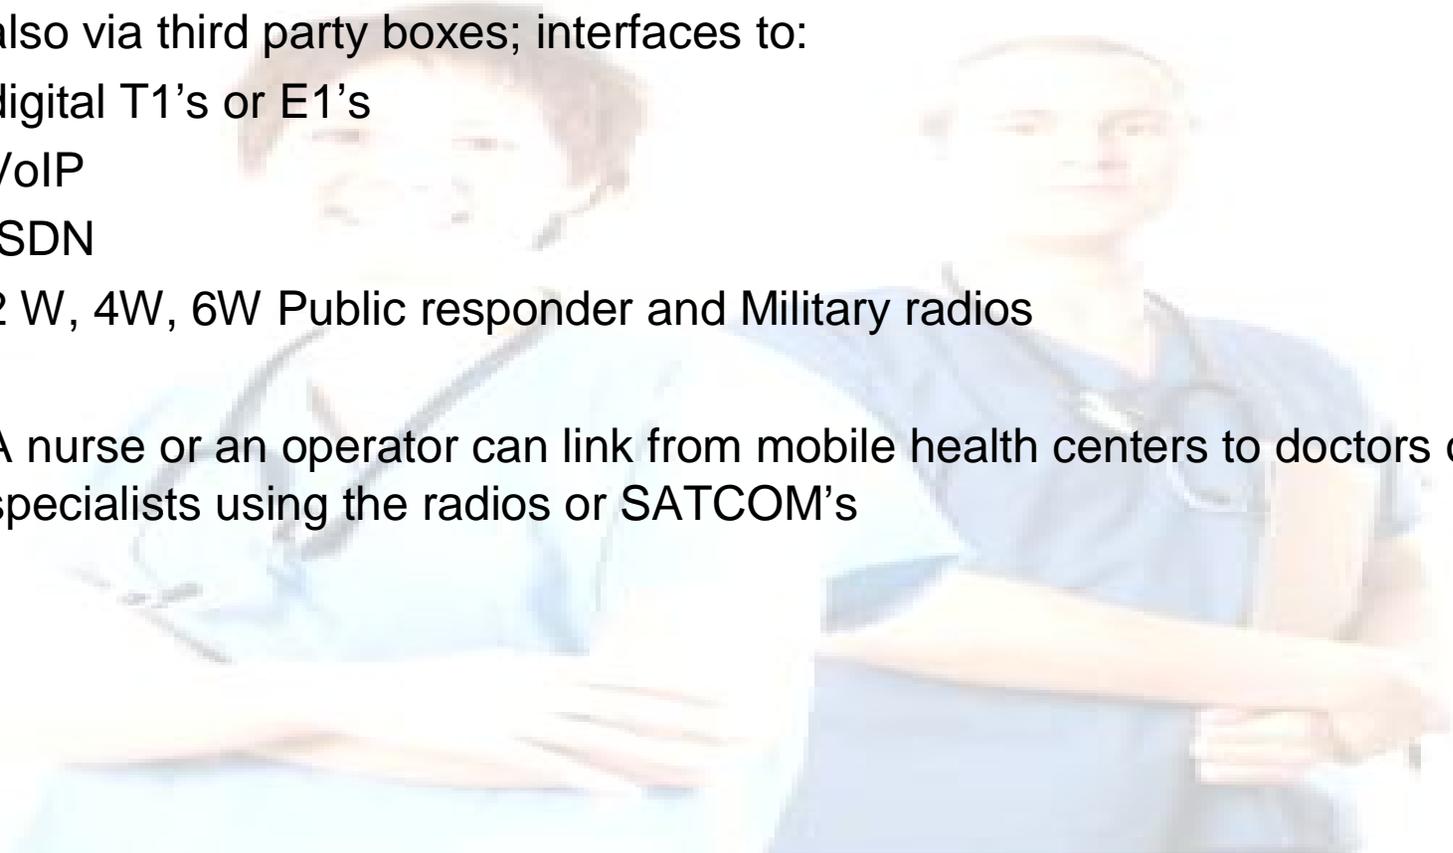

# Omni Health capabilities for Public-Safety/Military

---

Apart from general capabilities as listed in previous slide: Omni Health also via third party boxes; interfaces to:

- digital T1's or E1's
- VoIP
- ISDN
- 2 W, 4W, 6W Public responder and Military radios

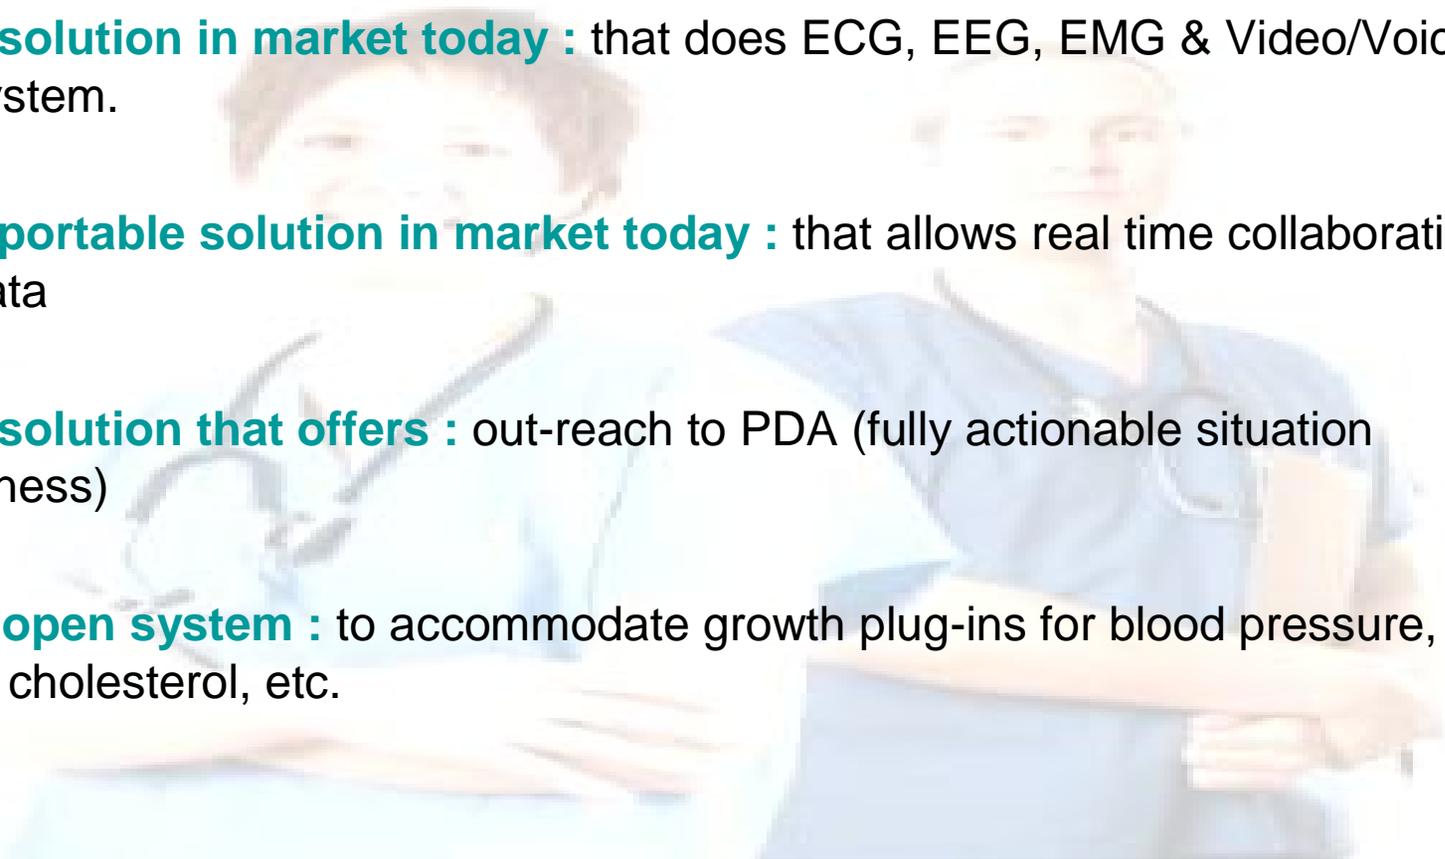

A nurse or an operator can link from mobile health centers to doctors or specialists using the radios or SATCOM's

# Omni Health Major Discriminators

---

- Only solution in market today** : that does ECG, EEG, EMG & Video/Voice in one system.
- Only portable solution in market today** : that allows real time collaboration of real data
- Only solution that offers** : out-reach to PDA (fully actionable situation awareness)
- Fully open system** : to accommodate growth plug-ins for blood pressure, sugar, cholesterol, etc.

## Why Omniglobe solutions With Omni Health .....

---

Quality Of Service for seniors, people in nursing homes,  
and people in remote communities goes up

---

Reduces stress on government health care funding

---

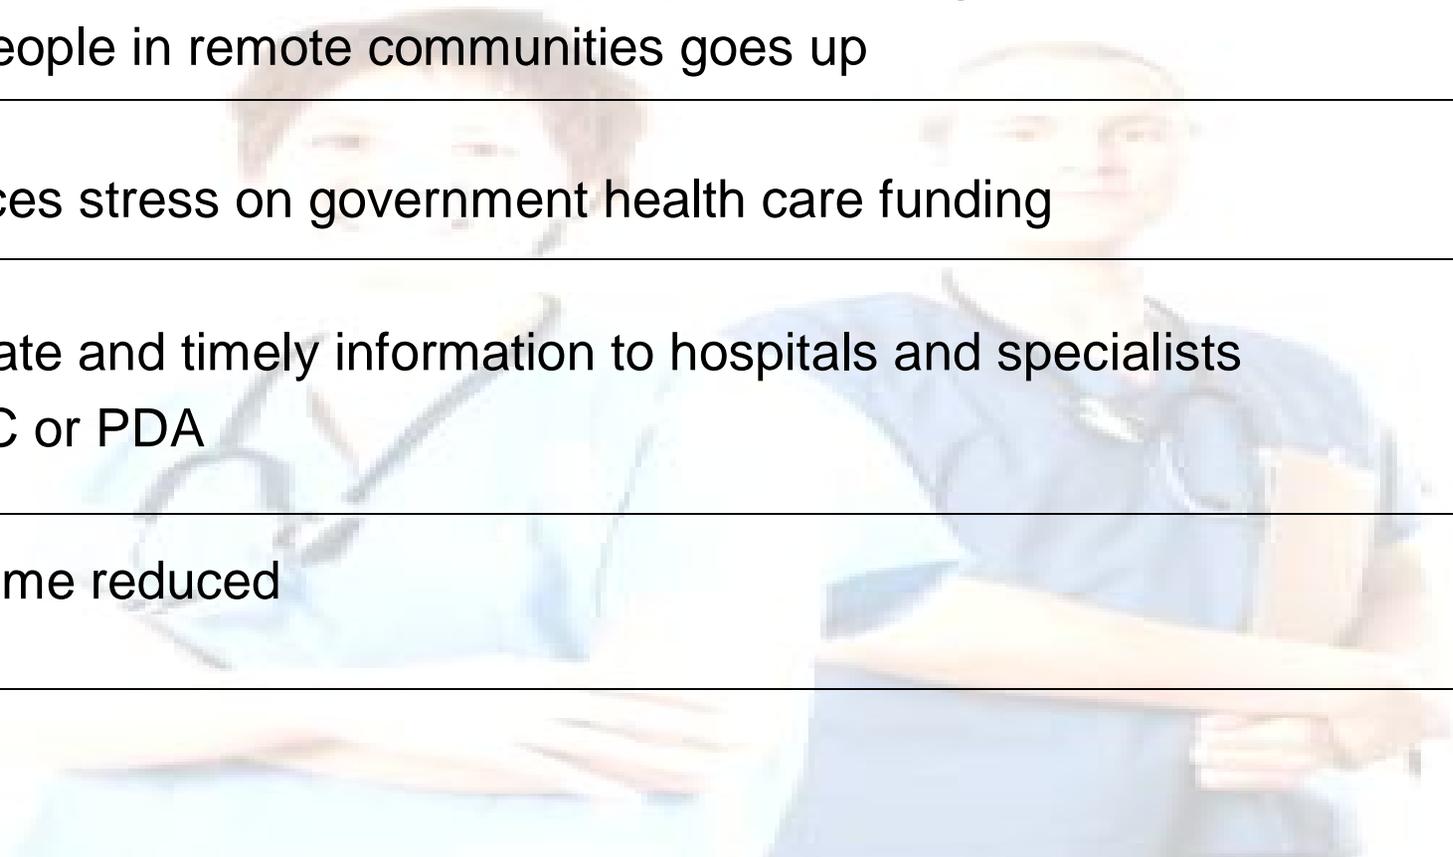

Accurate and timely information to hospitals and specialists  
Via PC or PDA

---

Wait time reduced

---

**Thank you**

# Appendix

---

A. Use case for Senior, nursing homes, remote communities and off shore such as ships

B. What do they have now & drawbacks

STOVE PIPED WITH NO COLLOBRATION WITH OFFSITE DOCTORS

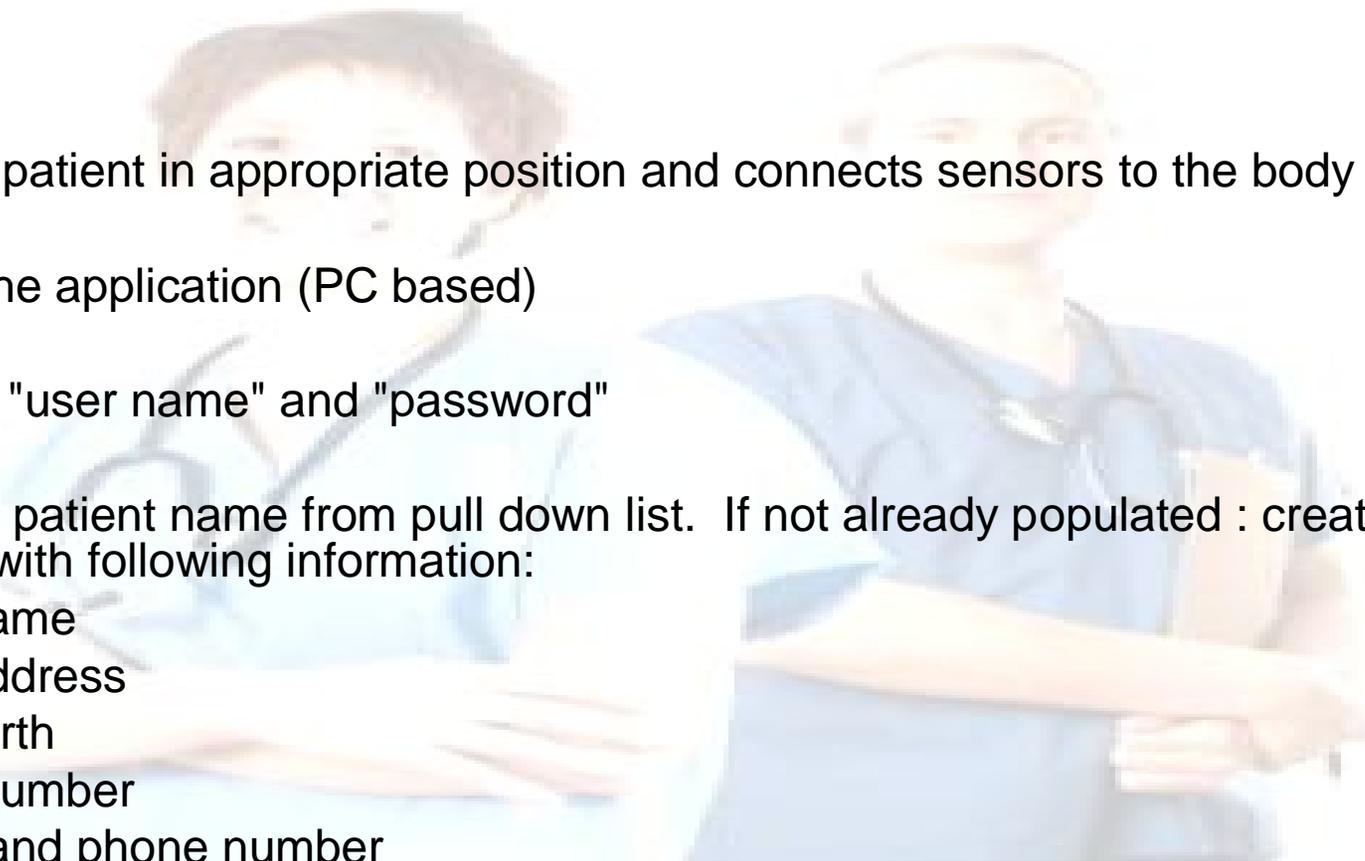

# A. Use case for Senior, nursing homes, remote communities and off shore such as ships

---

Collection side

Nurse

- places the patient in appropriate position and connects sensors to the body
  - launches the application (PC based)
  - logins with "user name" and "password"
  - selects the patient name from pull down list. If not already populated : create a new file with following information:
    1. Patient name
    2. Patient address
    3. Date of birth
    4. Medical number
    5. Address and phone number
    6. Nearest contact person name, relationship, address and phone number
- 

## A. Use case for Senior, nursing homes, remote communities and off shore such as ships

---

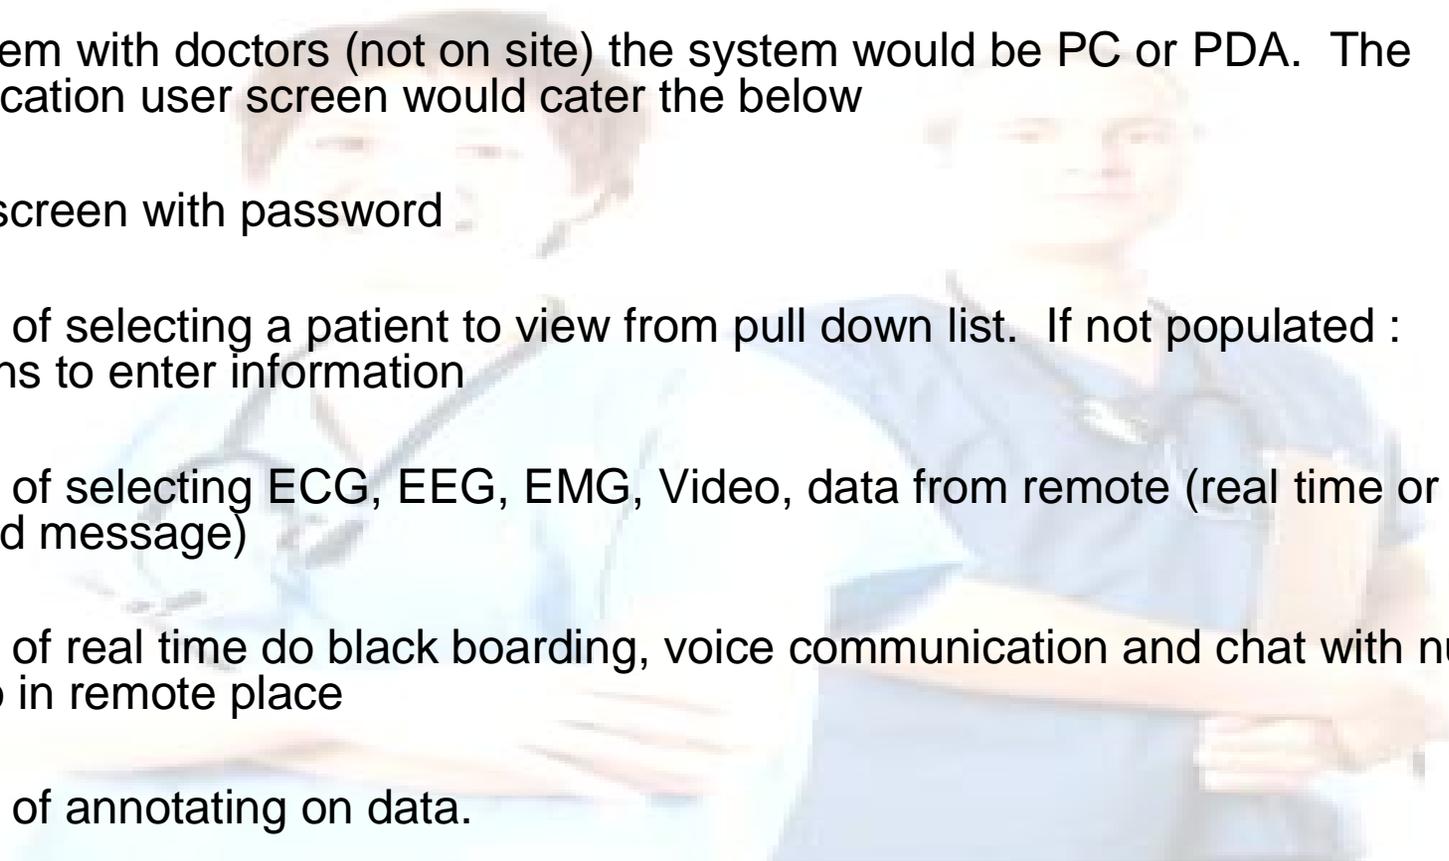

- after the above step, selects the doctor associates with the patient. If not available selects the doctor from the populated list and links. During this step, nurse can select multiple doctors. Also has option to call the doctor or doctors via the same system for real time viewing from their hospitals or save the data collected and then call for a doctor or specialists to view the data.
- .
- adjusts the video camera for proper view if a doctor or specialists are viewing real time. The doctors and specialists would not only see the data real time in their computer and or PDA but can also see the patient via video.
- starts the system to collect the appropriate data (ECG for heart, EEG for brain, EMG for muscles, blood pressure, sugar and cholesterol)
- if real time analysis by doctors or specialist : the nurse and them can on-line communicate via voice, and black boarding. The doctors can also write notes on screen and draw area of interest using annotation that will be visible to all participants.
- the last step is for nurse who can decide if the data needs to be saved or the test re-run. If to be saved the data will be saved under the patients name and time stamped. The nurse also has an option to email the whole proceedings to an another person (doctor or specialists)

## A. Use case for Senior, nursing homes, remote communities and off shore such as ships

---

In off site doctors area

For system with doctors (not on site) the system would be PC or PDA. The application user screen would cater the below

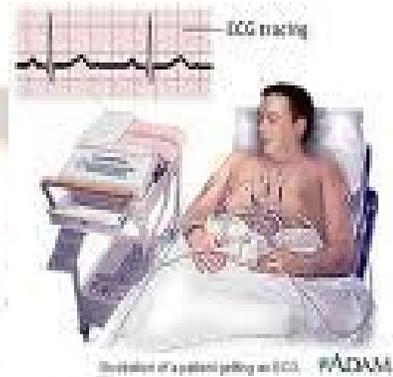

- Login screen with password
  - Means of selecting a patient to view from pull down list. If not populated : means to enter information
  - Means of selecting ECG, EEG, EMG, Video, data from remote (real time or saved message)
  - Means of real time do black boarding, voice communication and chat with nurse or so in remote place
  - Means of annotating on data.
  - Means of storing the data for later retrieval.
- 

# B. What do they have now STOVE PIPED WITH NO COLLOBRATION WITH OFFSITE DOCTORS

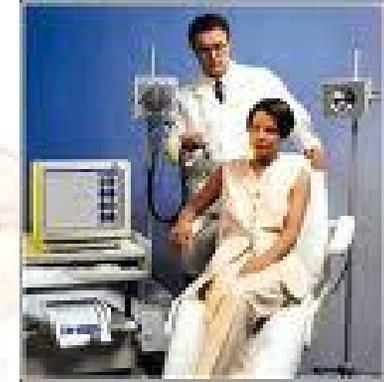

---

**EMG**

**ECG**

**EEG**

**DIGITAL WEIGHT**

**SUGAR & CHOLESTEROL**

**BLOOD PRESSURE**

## B. Drawbacks

---

-Dedicated system for ECG, EEG, EMG & peripherals

Multiple copies of readouts for heart, brain and muscle

-No integrated video, voice, and black-boarding with annotations

Reduces efficiency and increases note taking time

-Large form factor and expensive

Not affordable in senior homes, off-shore such as ships, ambulatory and first response

-No real time information sharing with off-site doctors or specialists

Increase in wait and diagnostics time
